

RESOLVING A DIAGNOSTIC DILEMMA

Finally, a reliable way to uncover pathological evidence of a synucleinopathy – all through a simple skin biopsy.

Introducing the Syn-One Test™

Based on a decade of world-class science, the Syn-One Test provides a comprehensive panel of alpha-synuclein biomarkers that help you to make a confident diagnosis for the patient.

Unlike other α-SN specificity and α-SN specificity in the detection of synuclein-related signs, Syn-One™, the key pathological marker for:

- Parkinson's disease
- Lewy body dementia
- Multiple system atrophy
- Pure autonomic failure

Syn-One Test™

Diagnose neurodegenerative disorders with clarity and confidence. Discover more at www.SynOneTest.com

YOUR PATIENTS DESERVE OBJECTIVE ANSWERS. SO DO YOU.

Introducing the Syn-One Test

The first commercially available test of its kind—applying world-class science and carefully honed laboratory techniques to accurately detect and visualize abnormal alpha-synuclein in cutaneous nerve fibers. All through a simple skin biopsy.

Order a free Syn-One Test Biopsy Kit

Objective pathological evidence to aid in the diagnosis of:

- Parkinson's disease
- Dementia with Lewy bodies
- Multiple system atrophy
- Pure autonomic failure

Advantages of the Syn-One Test:
